

# “LEST WE FORGET”

This is a candid, but never the less serious, look at escape systems and survival equipment from an earlier era. This equipment is still being used today in older aircraft in service with military air forces and now commercial companies worldwide.

Modern technology has advanced, but left this type of equipment behind. So what can be done to bring this equipment up to date and how can it be upgraded to fit in with today's modern requirements?

# In the beginning

# So what next?

We are not trying to re-invent the wheel, but just add some bling, and make it more user friendly for todays market.

Whilst looking good, we must not forget that it must still perform that primary role of saving lives.

These are some of the aircraft that we have to contend with that are still being used today by some military and now commercial companies.

# How do we start?

A Vampire ejection seat, prior to refurbishment.

# From old to new

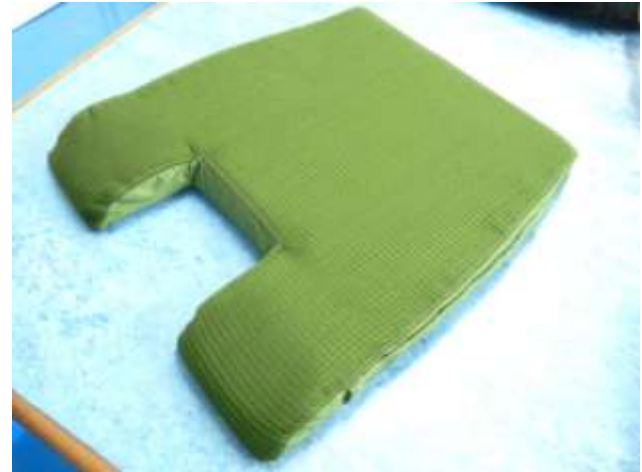

THE FINISHED ARTICLE

# Harness & Ancillary's

# PSP (Personal Survival Pack)

Refurbished PSP shell, with new cushions manufactured using new fabric technology.

# Survival Aids

# Conclusion

With the advancement of today's technology and trends veering towards purchasing new aircraft, we must not forget those who cannot afford to follow this trend.

Therefore the real requirement to upgrade current equipment is greater than ever.....
